

HOW TO MEASURE:

Measuring for your stained glass artwork inserts is simple. You will need a steel tape measure and a pencil and paper.

1. First, ensure that the recess the stained glass artwork is going into is not obstructed by protruding window handles or tile.
2. Next, measure the inside opening. The width and height may vary, so we suggest you measure in several places and use the smallest dimension.
3. Write down these measurements specifying height and width to ensure that you remember them and can give them to our stained glass designers when requested.

If you have unusual windows or special requirements we suggest giving us a call for advice on how to measure. We are here to help.

From pre-installation consulting and planning to post-installation support, Stained Glass Inc. is committed to answering your questions and helping you with your stained glass needs.
